Astronomy Explained Upon Sir Isaac Newton's Principles Aug 22 2019 The author, a Scottish astronomer named James Ferguson, wrote this guide to astronomy for a general audience according to the scientific principles laid out by Sir Issac Newton. Ferguson's love of the field is apparent from the first sentence of the book, in which he says: "Of all the sciences cultivated by mankind, astronomy is acknowledged to be, and undoubtedly is, the most sublime, the most interesting, and the most useful."

COVER Mar 29 2020 The COVER extension to the Stand Prognosis Model predicts tree canopy closure, crown volume, crown profile area, and foliage biomass within vertical height classes, and the probability of occurrence, height, and cover of shrubs in forest stands. The model may be used to produce a descriptive summary of a stand at the time of inventory, or to project overstory and understory characteristics through time for natural and managed stands. This paper documents use of the COVER program, an adjunct to Version 5.0 of the Prognosis Model. Preparation of input, interpretation of output, program control, and model characteristics are described. Potential applications of COVER estimates to wildlife, hydrology, and insect pest modeling are presented.
